

GM 4L60 4L60-E & 4L65-E

Features & Benefits

- Eliminates concerns of forward piston breakage.
- Improved durability and strength over the OEM's cast aluminum forward piston.
- Can be used in both early and late model transmissions.

Billet Forward Piston

Part No.

77764-01

1 Billet Forward Clutch Piston

Part Summary:

The OEM cast aluminum forward piston frequently breaks due to rough castings and high stresses. This billet aluminum forward piston eliminates these concerns by using high strength billet material and a design with added contours in the high stress areas.

This piston can be used by itself or with Sonnax input housing reinforcement sleeve kit **77733-01K**. No machining or modification is required to use this piston and it can be used in all 4L60/4L60-E/4L65-E as long as it is used in conjunction with an aluminum over run piston.
