

ALUMINUM POWERGLIDE

Features & Benefits

- Large boost ratio
- Lengthened critical spools provide better hydraulic seal

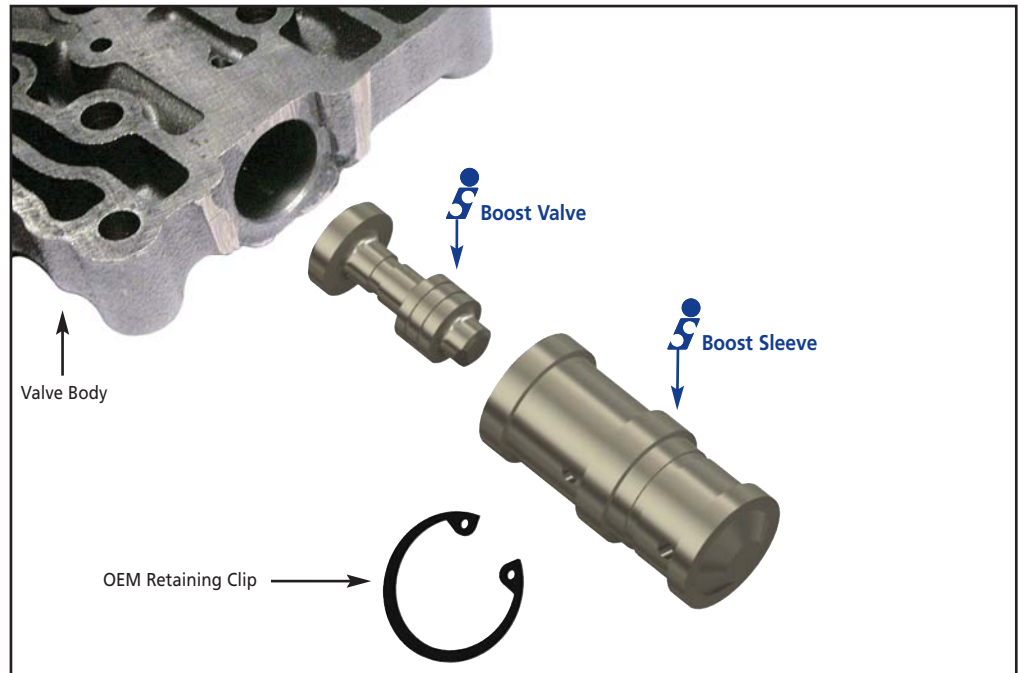

Boost Valve Assembly

Part No.

28999-01K

1 Boost Valve

1 Boost Sleeve

Part Summary:

The OEM boost sleeve wears from repeated oscillation of the boost valve. The wear allows leakage, reduces line pressure and contributes to line pressure instability. Additionally, the original steel parts are also prone to rust damage in vintage valve bodies. Sonnax now offers a replacement boost assembly, **28999-01K** for the Aluminum Powerglide. This high performance design is the largest factory size (.489" dia. at the small spool), and has a lengthened critical spool diameter to provide better hydraulic sealing capabilities.
