

400, 4L80-E REAR UNIT ENDPLAY SHIMS

H I G H P E R F O R M A N C E T R A N S M I S S I O N P A R T S

FEATURES & BENEFITS

- Shims allow for setting of rear unit endplay by shimming components at the same location as OE selective spacers
- Can also be used between the two carriers to optimize reaction carrier endplay

Part No.

34006-05

10 Shims, .005" Thick

PART SUMMARY:

Sonnax now offers two solutions for excessive endplay in your GM 400/4L80-E units. The Sonnax rear unit endplay shim **34006-05** can be stacked under the four-tab metal thrust washer on the rear of the output shaft flange to set unit endplay in the same manner as the OEM selective three-tab spacers. These shims eliminate the need to stock expensive or hard-to-find OEM three-tab spacers and are an alternative to the Sonnax shim, **34500-Z**. Shimming at this location maintains the stack-up height between the gear train main shaft and sun gear shaft.
