

4L60, 4L60-E, 4L65-E, 4L70-E

Features & Benefits

- Firmer shifts

Enhanced Performance Accumulator Spring

Part No.

77704S

1 Spring

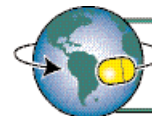

Part Summary:

The Sonnax Performance accumulator spring provides firmer shifts for the enthusiast who appreciates quick, positive shift feel. The spring design provides performance shift feel but does not reduce accumulator piston travel. This allows for a firmer but still cushioned shift that minimizes shock to the band and shafts.

Use 77704S in these applications:

UNIT	1-2	3-4	FWD
4L60	Y	Y	Y
4L60E, 1993	Y	Y	N
4L60E, 1994 & UP	see note	Y	N
200-4R	N	Y	N

Note: For 1994 & newer 4L60-E applications only:
Installing this spring toward the separator plate in the 1-2 location, as shown above, will result in a extra firm shift. This spring should not be installed below the piston, as it will result in an overly soft shift.
