

VBX-ValveBody Xpress™

Aisin Warner 6 Speed (09G or TF60 SN)

**** IMPORTANT NOTES ****

This version is for front wheel drive vehicles.

There are (4) different styles of 09G Valve Bodies. Designs vary based upon location of the heat exchanger (cooler) & whether or not the valve body has pressure switches. The cooler is either mounted on top of the bell housing - OR - the case will have cooler line fittings for a remote cooler.

*Dependent upon production date, this valve body was produced either with or without pressure switches. Models produced through June of 2004 WILL have pressure switches. Models produced beginning July of 2004 WILL NOT have pressure switches. Please see **RED ARROWS** above for location of switches.*

FINAL NOTE: The switches have nothing to do with the cooler location!!

!!! DANGER - WARNING !!!

Accurate Valve Body Identification is necessary. The (4) styles DO NOT interchange! Installing the wrong valve body will result in a lack of lubrication to the gear train causing catastrophic failure!

To order the correct valve body for your application, you must determine the location of cooler AND whether or not you require pressure switches!
